## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference character(s) not mentioned in the description: 102 and 103. Corrected drawing sheets in compliance with 37 CFR 1.121(d), or amendment to the specification to add the reference character(s) in the description in compliance with 37 CFR 1.121(b) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Japanese Patent Document No. 2000-252550 to Imai.

With respect to claim 1, Imai teaches an organic EL laminate type organic switching element, wherein an organic EL element part (200) and an organic switching element part (10) are laminated on each other, and a control electrode (5 and/or 6) is provided to which a control signal line for controlling the emission/nonemission condition of the organic EL element part is electrically connected (figures 3, 4, 13, and 14).

With respect to claim 2, Imai teaches the configuration of the switching element being such that the control electrode also serves both as the cathode of the organic EL element part and as the anode of the organic switching element part (figures 13 and 14).

With respect to claims 3 and 4, Imai teaches an image plane being composed of a plurality of pixels and the pixels each have two or more subpixels (figures 3, 4, 13, and 14; paragraph 0052 of the English translation).

With respect to claims 5 and 6, Imai teaches the subpixels each being constructed with the organic EL laminate type organic switching element in which the organic EL element part (200) and organic switching element (10) part are laminated on each other (figures 13 and 14), and the control electrode (5 and/or 6) is provided to which the control signal for controlling the emission/nonemission condition of the organic EL element part is electrically connected (figures 3, 4, 13, and 14).

***Citation of Pertinent References***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following references further show the state of the art:
